Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 1-9, drawn to a wafer container system subcombination, classified in class
 220, subclass 23.6.

- II. Claims 10-12, drawn to a pair of wafer containers and a stack of wafer containers of a combination, classified in class 206, subclass 509.
- III. Claims 13-14, drawn to a method of stacking wafer carriers, classified in class 29, subclass 428.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it doesn't require a three groove kinematic coupling. The subcombination has separate utility such as a wafer carrier that is used by itself and never requires being stacked or paired with another wafer carrier.

Inventions III and (I and II) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the subcombination wafer carrier never requires pairing with another wafer carrier and the plural wafer carrier combination never requires the step of inserting between first and

Application/Control Number: 10/005,188

Art Unit: 3727

second wafer carriers an adaptor plate since the adaptor plate may be coupled to one wafer carrier and then placed into engagement with the other wafer carrier without inserting the adaptor plate therebetween.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Larry Alexander on October 20, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Castellano whose telephone number is 703-308-1035. The examiner can normally be reached on M-Th 6:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W. Young can be reached on 703-308-2572. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
